- Accepts up to Two Adaptive Switches (3.5-mm/0.125-inch)
- Scan with Apple Switch Control and with third party, in-app scanning
- Supports Long Press for "Four Switch" Functionality
- Adapter Included: Lightning with/without Recharge Port, or USB-C
- Also works with Android Mobile Devices; and Windows, Mac, Chromebook and Linux Computers
- Origin Instruments Quality, Reliability, and Support

Tapio™ brings Origin Instruments' history of high performance, yet easy to use switch interfaces to the Apple iPad and iPhone. Using the included adapter, plug Tapio into the iOS Device, run through the short Apple configuration process and begin scanning – it's that simple.

Direct plug-in solves a multitude of issues. It eliminates confusion with Bluetooth ghost pairings, adding and deleting devices or entering pairing codes. Since Tapio is powered by the host device there are no worries with batteries.

Use with our Orby™ switches or with our Sip/Puff Switch. Tapio also works with third party single or dual switches.

Since Tapio is a native USB switch interface, use it on any platform that uses a USB mouse, keyboard or joystick – smartphone, tablet, computer or communication device.

Simply brilliant.
